

Age Protect

Paul Trevithick*, Denise Tayloe†, Alexander Yuhimenko‡

May 29, 2023. Revised May 29, 2023

Abstract

We propose a technical approach to enable service providers to perform age verification of their users so they can offer age-appropriate content and services consistent with prevailing laws and regulations. It supports users of all ages and protects minors by delegating access control decisions to their guardians.
